

Satellite Digital Broadcasting Service

Flexible Services

- **NovaCast-IP**

The NovaCast-IP service has been designed to meet your most demanding corporate information distribution needs. Whether you are looking for fast Internet or Intranet connectivity, for corporate streaming video distribution, interactive distance learning or for large data file distribution, this service will satisfy all of your requirements.

- **NovaCast-Audio**

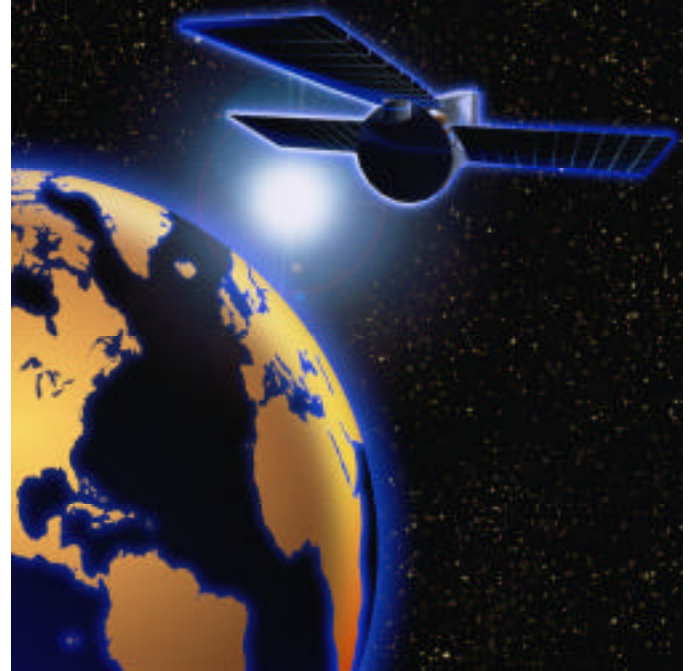

Build an audio broadcasting network controlled by one of the worlds most advanced network control systems. Control individual broadcasting sites or groups of sites. Scheduling commands lets you regionalize programming and commercial messages and remotely control peripheral devices, using optional relay cards.

- **NovaCast-Video**

You can use our satellite network to deliver business television to your branch offices, to provide training or corporate news for your employees. Broadcast your corporate video information to all your remote sites simultaneously. All sites are individually addressable to allow you to target your audience.

- **NovaCast-Data**

If you need to distribute real time data, such as stock quote information, paging data or news to multiple remote sites, the NovaCast-Data service can be customized to meet all of your data rate requirements.

NovaCast is a Satellite Broadband Digital Broadcasting Service, which has been developed for the point-to-multipoint distribution of multimedia information. This high-speed service, which originates in Toronto, Canada, utilizes the Anik E1 satellite serving Canada and the northern part of the United States.

NovaCast allows you to create your own private business network, and maintain control of your own traffic using the latest DVB (Digital Video Broadcast) world standard technology.

NovaCast's service rates are based upon the bandwidth requirements of your network, which can be tailored to meet your specific needs. Most receive site locations require only a 0.9 meter diameter antenna to maintain an annual 99.9% reliable network.
