

Customizable Network Control

Tired of running from one equipment rack to another?

Frustrated by cryptic commands that control your equipment?

Need remote access to your site?

You Need SecureNet!

SecureNet is the Customizable Network Control System that allows you to connect all of your equipment to your computer network, and control it from your desktop.

SecureNet is a computer based system which configures, controls and monitors various pieces of equipment, and collects and processes the alarms that are generated by the equipment.

SecureNet provides the following benefits:

- Controls, monitors and configures your equipment
- Equipment operational status and controls presented by customizable graphical images.
- Equipment status changes reported as customizable text messages
- Maintains an event log
- Multiuser capability
- Alarms and status changes can be made to trigger an alpha-numerical page or fax to a technician.
- Highly modular ensures rapid and easy customization
- Customized modules can be supplied for any piece of equipment
- Operates under Windows NT

The system is highly modular which allows for rapid and easy customization.
